

Down To Earth 100% Natural Potting Soil

- An excellent all around mix for starting seeds, transplanting, vegetable gardening, and container gardening.
- Provides a long lasting supply of nutrients and micro-nutrients, and is rich in worm castings.
- Comprised of bark that has been composted with dairy manure, coir fiber instead of peat moss for a superior texture for rooting and extra water holding capabilities, perlite, and diatomaceous earth for pest suppression.
- Contains a 4-6-2 fertilizer that has soft rock phosphate, steamed bone meal, blood meal, fish meal, Norwegian kelp meal, k-mag, and for a little more of a boost we have added bat guano.
- Also includes a healthy dose of endomycorrhiza for a quicker healthier start to your plants root systems.
- Because of the generous percentage of fertilizer added into our Potting Soil an NPK has been to the bag.
